6. Remarks and Other Relevant Information: The irrigation water associated with this water right currently comes from the Entiat River via the Gaines
irrigation pipe. This system is old and presents problems of maintenance on the headworks, fish screen and pipe itself. The existing domestic well does not provide enough water to serve the house, lawn and gardens/pasture, so the applicant wants to install an irrigation well as an additional and primary point of diversion for the irrigation water right. Primary use of a well versus surface water would eliminate most fish entrainment and mortality issues and also avoid diverting surface water from the Entiat River during periods of high demand/low flow in the late summer.
ESA listed salmonids that utilize the mainstem Entiat River within the Lower AU and project portion of the subbasin include endangered Upper Columbia River spring Chinook (<i>Oncorhynchus tshawytscha</i>), as well as endangered steelhead (<i>Oncorhynchus mykiss</i>) and threatened bull trout (<i>Salvelinus confluentus</i>). Non-listed salmonids such as summer Chinook and Coho, and resident fish species such as westslope cutthroat trout are also found here.
This project addresses limiting factors and implements actions recommended in the Entiat WRIA 46 Watershed Management Plan approved in 2004, the Entiat Subbasin Plan, and draft Upper Columbia Salmon Recovery Plan. Therefore, we request expedited processing under WAC 173-152-050(2)(b) and (3)(a).
